Step in and 'FEEL THE DIFFERENCE'

*WE RAISE DOUBTS ON YOUR BEHALF
BECAUSE WE UNDERSTAND YOU SO
WELL! DOUBTS ARE SOLVED TO YOUR
UNDERSTANDING BECAUSE WE CARE
FOR YOU.*

We at MindMover are here to prepare students for Engineering, Medical, Foundation and Board exams anytime, anywhere and guide you in whatever you want. This smart learning solution helps you master all subjects and topics by attending live and watching recorded video lectures any number of times and clarify your doubts through the student portal. With our unique teaching pedagogy, we have been able to help the students realize their dreams and get admission into their desired institute for engineering or medical. The core pillars of our foundation are student-centric approach and feedback-driven mechanism.

IIT JEE PREPARATION - A Marathon!

Preparations starts with you

- Take healthy food, do some meditation / yoga and take proper rest.
- Make a timetable and spend at least some specified hours to each subject (physics, chemistry or maths) daily or weekly.
- Remember it is not about the number of hours you spend, it is about the number of productive hours in the right direction.
- The syllabus is vast but it is doable and yes, for getting good result you need to cover most of it! There is less chance that you will clear the exam if you are expert at only few topics. So, the key is to understand your strengths & weaknesses and spend time wisely.
- Categorize the topics based on your strengths and weaknesses, spend relatively more time on your weaker topics.

How to work on your weaknesses?

- you will find certain subjects extremely boring, some chapters take longer than others to even get a basic understanding. Keep reading them again and again till you understand the concept, ask experts for help and do it again. You will get it!
- Try to understand the topics / concepts rather than remembering them (What are you reading? Where is it applicable? What is the basic funda behind it?). Sometimes you need to remember some chemical formulas, equations but most of the times you should be able to understand the concept.
- You need to take care of two percentages as well. Firstly how much of total syllabus have you covered and secondly what is your competency percentage of your well prepared topics? According to me both % should be greater than 80, the greater the better. The best way to analyze these percentage is by taking good test-series once you are done with your preparation. Work on improving your percentage.
- Don't underestimate any individual subject and do a balanced preparation. Any subject can get you a rank based on the difficulty level of the paper.

NEET PREPARATION

How to score 600+ in NEET

The National Eligibility cum Entrance Test (NEET) is the all India entrance examination for admission to various MBBS, BDS, and AYUSH courses. It is one of the most complicated competitive medical graduate exams being conducted in India. It requires a lot of hard work, patience, and commitment to succeed NEET with 600+ scores. The NEET All India Rank (AIR) is the deciding factor for the admission into the various undergraduate medical courses. As All India rank is evaluated based on the NEET scores, it becomes immensely crucial for aspirants to score 600+ in NEET. The MBBS and BDS seats in few good colleges are allocated based on aspirant's All India Rank.

Do's and Don'ts At the Time of NEET Exam

The NEET Exam is almost coming closer. We are sure, students must be really anxious and at the same time perplexed about many things. They may at times even doubt their own preparation method and thereby lack confidence. And this is something which students of every generation go through before they have to appear for an exam.

However, it is important to brush off nervousness from the mind and believe in one's strength.

Students who are focused, determined and have a clear mind to not bargain less than admission in a deemed medical college in the country surely has spent their precious time in **NEET preparation**. Now is the time to continue staying motivated and focus on the second part of exam preparation. By now, they must have finished with concept building and also mastered all the areas of the competitive test. Right now, their focus should be to revise all the concepts and practice mock test papers to analyze one's readiness to give one's best on the final day.

Make habit of writing:

As per a report of the Institute for Physical Activity and Nutrition (IPAN) at Deakin University, writing by hand has a direct relationship with your memory. So, the more you write the more you remember. The reports say that when we write, we have to coordinate our verbal and fine movement system, which makes our learning ability sharper. To start with you're writing practice, you need to follow the following tips:

Use a lot of colors :

Using different colors for different subjects/ topic or highlighting important/ very important facts with different highlighter pens will help you remember them for long. When you write plain and boring, you tend to forget, but a colorful picture is easier to understand and memorize.

Get creative :

There are a lot of creative ways to enhance learning skills. If you make learning creative, the chances of retaining the information are increased. To utilize creativity in your learning, you can.

Take advantage of the technology :

Make your notes virtual and save them on your smartphone, iCloud or any other virtual space. This will offer you instant access to the information and assist in quick revision.

Stay prepared :

You need to stay prepared, with a paper and pencil, and write down whatever you listen and consider important.

Start Taking notes :

Just like we said earlier, taking notes is an exercise wherein you use the maximum part of your brain. Take notes of what you are being taught or what you are reading, and also take notes of what you think about the specific topic.

‘A mission cannot be accomplished without a vision’

This stands true for all the aspirants that aim to crack some of the toughest competitive exams in the country including JEE Main / Advanced / NEET / AIIMS etc. Candidates need to make a proper timetable so as to cover all the important topics. It is better if you divide the entire syllabus into sections and allocate equal time for each subject. You need to be disciplined with your study schedule and precede your preparation according to the timetable. Your entire syllabus needs to get finished before 20 days of coming exam, so that you can get enough time revising the subjects.

How to enhance your learning skills?

Learning is an ever going process that spread across your life cycle. However, learning as a student is a lot more different than other aspects of learning, and often difficult also. Retaining what you learn is very important, otherwise, it is like a lot of failures going down the drain. Every step of your life will be a learning for you, but, the foundation of it is laid when you are in your early years of life, i.e. learning as a student.

Several students complained that they are unable to learn and even if they do, they remember only a fraction of what they have learned. When you are preparing for competitive exams, this can be a huge problem. You might face failure, despite giving your best effort and this can be heartbreaking. To make sure you do not have to face difficulties and get the result you deserve out of your hard work, we have compiled a few tips and tricks to enhance your learning skills. No matter what examination you are preparing for, these tips will help you make your study time more effective and efficient.

Understand the study material :

To make learning effective, you need to first understand the study material. For better understanding, the best way is to teach and learn. For this you should:

- Gather information from various sources apart from the study books. This includes online resources like YouTube, websites and many online videos. The innovative way of digital learning is considered as an effective way.
- Focus on study material and take notes. Taking notes is one of the most effective ways to learn things faster, as you are paraphrasing the information in your own words and this helps you better retain the information.
- Teach others, it will help you retain what you learn and teach. You can try group studies and teach the concept you have learned to others. This practice allows you to have better clarity of the subject material and thus remember it for a long time.

At MindMover Your Career is Our Top Priority

THE FUNDAMENTAL JOB OF TEACHING IS NO LONGER TO DISTRIBUTE FACTS BUT TO HELP CHILDREN LEARN HOW TO USE THEM BY DEVELOPING THEIR ABILITIES TO THINK CRITICALLY.

Live Teaching In Digital Classroom:

Live Classes gives students a unique opportunity to enter a dynamic global classroom. Teachers also gain valuable teaching experience, ideas and skills to help motivate their students. Each Live Class is led online by highly experienced Faculty to render high quality education.

Provide Motivational Lectures:

Motivating students to encourage them in all aspects of life not only in terms of study. Motivational personnels will be sharing their experiences with the students to guide them in their difficult times. Motivational activities are also being conducted to track the state of mind of each student.

Improve Your Focus :

If you are serious about learning and enhancing your skills. You first need to work on your focus. For this, you must:

- Switch off your mobile phone before you sit down to study.
- Have to set a schedule for study and stick to the time table. Having a set schedule helps your brain accommodate effective learning on the specific time period when you start learning.
- Make enough room for breaks during your study time. Yes, the monotonous study is never effective. You need to give enough to your mind to refresh and start memorizing what you read and understand.
- To make things more effective, take periodic tests. You can either design a paper for yourself or log into a website and seek mock test papers.

So, now that you know the tips & tricks of improving your learning skills, get started and crack the examination with flying colors.

Besides this, there are certain do's for the students to consider and follow them religiously.

Technology in the 21st Century has the power to drive one's energy and imaginations to heights. In this case, technology can be a great asset for the students.

They can utilize the power of video lectures. These video lectures are by top teachers from the world and they can help students go to the roots of any concept. By referring them, students can brush up concepts and at the same time remember concepts better.

It is also advisable to not only take tests but analyze its results alongside to know one's mistakes and let one find out the key points where they have to make some extra effort. So, students must strive to enroll in some test series or purchase an online test series that help them to get a glimpse of NEET paper.

Students should make a proper schedule and abide by it unfailing.

There may be multiple reasons for which students fail to follow the timetable prepared by them. That is why; it is always a wiser option to make a quasi-rigid timetable. Such kind of timetable is accommodating enough to undergo changes as per the condition.

Note : Students should not ask anyone else to make the timetable for them but it themselves based on their personal comfort and convenience.

Candidates should not stress too much and give ample rest to the body and mind so that they can remain active and the learning capacity would remain at its peak.

It is best if students can maintain a diary where they can maintain formulas and key concepts better. This will help students in increasing their basic understanding of the subjects.

Further, it would also assist students in strengthening the **5R's strategy** - reading, remembering, revising, reviewing and delivering results.

These are the important actions to be followed at this second phase of preparation rather than being anxious and nervous as the exam nears about. There are a couple of other considerations which work as best tips of preparation of NEET and these are mainly the don'ts which students need to consider.

First and foremost, avoid utilizing shortcuts and learning on new techniques. At this point in time, students must just concentrate on learning new techniques and not incorporating shortcuts. It is important that students take out time to strengthen what they have already learned.

Second, avoid compiling things for tomorrow as the saying sums it up 'tomorrow never comes.' Following the schedule as mentioned and as per the timetable will help students achieve the goal and the target.

Avoid taking advice from too many mentors as students end up being frustrated with the conflicting learning. Alongside avoid discussing with friends about exam preparation as such can lead to confusion, comparison of one's progress level with the others. This can actually lead to depletion of student's confidence level.

Avoid wasting too much time on referring too many books at this point of time and rather stick to one or two good books that give a clear explanation of concepts.

Lastly, avoid ignoring health at any cost for the saying goes, "health is wealth." Few days of sickness implies they would lose crucial days (out of the few days left) for preparation of the exam.
